

Credit Card Fraud Detection

Intern Details

- Intern ID: URK24CS5055
- Full Name: KODATHALA DHAMODHAR

Objective

To identify fraudulent credit card transactions based on transaction amount patterns.

Technologies Used

- Python
- Pandas
- Google Colab

Output screenshots

```
df["Status"] = df["Transaction Amount"].apply(detect_fraud)

print(df)

test_amount = 50000

print("\nTest Transaction:", test_amount)
print("Prediction:", detect_fraud(test_amount))
```

	Transaction Amount	Status
0	100	Normal
1	25000	Fraud
2	500	Normal
3	45000	Fraud
4	700	Normal

Test Transaction: 50000
Prediction: Fraud

```
import pandas as pd

data = {
    "Transaction Amount": [100, 25000, 500, 45000, 700],
}

df = pd.DataFrame(data)

def detect_fraud(amount):
    if amount > 10000:
        return "Fraud"
    return "Normal"

df["Status"] = df["Transaction Amount"].apply(detect_fraud)

print(df)

test_amount = 50000

print("\nTest Transaction:", test_amount)
print("Prediction:", detect_fraud(test_amount))
```

Result

The system successfully classified transactions as Fraud or Normal.

Conclusion

Fraud detection techniques can help reduce financial risks and improve transaction security.
